KNAPP TO SHOWCASE PICKING TECHNOLOGIES AT IMHX

KNAPP, the global warehouse automation and software supplier, will showcase its expertise in efficient omnichannel distribution on stand 12U85 at the IMHX show from 13th to 16th September in Birmingham, UK. KNAPP has over 1600 installations worldwide, with clients in the UK including John Lewis, Boots, M&S, Staples, Clarks, British Gas and Well – all of which have resident KNAPP Customer Service teams.

Featured on the KNAPP stand will be its new Pick-it-Easy Multi workstation, demonstrated in conjunction with the Pick-it-Easy Pocket overhead sorter. In this system, pockets are connected to an overhead rail system via a 'rolladapter', which features an RFID transponder. The solution uses a three-step matrix sortation process to sequence the pockets into the precise order required by the packing stations.

Pick-it-Easy Multi is an innovative workstation for multi-channel environments at which flat-packed goods can be placed into sorter pockets. Operators take articles – such as film-wrapped garments and DVDs – from the transport container and move them over an integrated scanner. When the item is scanned, the confirmation is displayed through a light signal in the adjacent chute, through which the goods land in the prepared pocket. The article data is allocated to the RFID transponder on the pocket and, from this moment on, the goods can be identified in the system. ■
